

**Position: Asset Management**

**Location: Madrid, Spain**

**About the role:**

This position offers a great exposure to some of the most significant solar energy projects built by FRV worldwide to date as well as the opportunity to take responsibility for all Asset Management activities whilst continually ensuring compliance and good industry practices on and off the sites.

The role requires a person with a good technical and financial understanding, a critical eye, good communication, client and organizational skills - your key responsibilities will include:

- Organizing and completing all Asset Management activities for the assigned PV projects and BESS Projects;
- Supervising and managing all relevant contracts (EPC Contract, Finance Agreement, O&M, PPA's, interconnection agreements, etc.);
- Ensuring on-going compliance with all law, legislative requirements, federal and state legislation in relation to the operation of the solar farms;
- Review O&M reports, processes, procedures, etc, and ensure that maintenance activities are carried out in safe and effective manner
- Review EPC/O&M contractor's performance calculations against contractual requirements
- Monitor daily performance of the assets and alert the O&M contractors of any performance issues
- Calculate and assess performance losses for FRV's assigned assets
- Create, review and maintain performance models based on as-built and operational data
- Analyse performance data to identify trends in equipment failures
- Reporting on Asset Management activities and O&M services performance by the contractors;
- Managing and maintaining good relationships with main stakeholders, like authorities, utility, lenders, advisors, the community and the owners;
- Participating and / or leading site visits and inspections involving third parties including operators and contractors;
- Providing inputs for new projects OPEX estimations;
- Preparing AM's Scope of Works in new projects;
- Supporting FRV's development team in the new project's development phase.

What experience and skills are we looking for?

- Ideally you should have some exposure to large infrastructure projects assets management activities, with desirable experience in solar and wind generating projects;
- +4 years of experience in Asset Management function (at least 2 year of experience in large scale renewable assets);
- Experience in working in an international environment;
- Experience in financing process;
- Relevant Engineering Qualification;
- Good understanding of Asset Management methodologies;
- O&M knowledge of solar and/ or wind plants/installations would also be a benefit.
- Strong understanding of contracts including management and reporting;
- Outstanding communication skills;
- Strong MS EXCEL and IT skills (Python, Power BI);
- Critical eye for all compliance and safety;
- Strong commercial and negotiation skills;
- Good understanding of Electrical systems;
- Be self directed and a good team player
- Project management training and/or certification will be a plus
- Machine learning and AI understanding
- Proficiency in English
